Just thinking about it makes me want to lay on the ground and hang onto the grass! ☹

Celtia, the grass is what will be moving. What you need are 'sky hooks'.

If you can't hang on to the grass you might as well smoke it.

My plan is to jump right when it happens and let the earth float gracefully under me hahahah 😊

Good topic 😊

Squareball, that reminds me of an old Nike commercial that explained (through physics) how MJ, at the point of his take off, achieves a low earth orbit.

I bet if we all ran in the same direction, and jumped at the same time (the whole world), I bet the friction would move the crust over the core. We can have an earth shift whenever we wanted.

All these threads stopped.

I've been writing a vb app that will look for changes in these threads, and have been waiting all day for a change to see if it is identified. I finally had to do it myself.

Sorry for the nonsense post, no real information here, but I needed to test.

Thanks for all the responses regarding the question has the earth shifted on it's axis in the year 2000. Concerning this same subject here is an excerpt from a flyer that I recently received. The writer of this article states as follows. I have watched the sun go down in its farthest northern position in a certain place on the horizon being eclipsed by a chimney on a certain building. This summer however the sun set to the right of the chimney. This means that the sun has set further north. A friend of mine who is a Delta Airline 707 pilot told me that the magnetic poles have shifted enough to make Trans-Atlantic flights off by over 100 miles They now have to manually correct for this in flight. Well, that is the end of the excerpt . Anymore thoughts out there concerning this additional info . It's kind of interesting isn't it? If this has actually occurred, (and maybe continuing to happen as we speak)what will be the ramifications for life on Earth ? Any thoughts? Think fast, we may have only seconds left . Ha! Ha!See you all on -line

Hi Elaine!

Hope you don't get upset when some of the crew get a little silly with an otherwise serious subject. There's some heavy stuff in many of the threads and topics here....sometimes we need to giggle.

I respect your observation of the sun in relation to that chimney. All observations, weather, astronomical, etc, are of this in relation to that.

Anyway, the earth is going thru all kinds of motions naturally; for example, there is a normal wobble of the axis that actually takes thousands of years to complete. But at somepoint, somebody is bound to be in the right place at the right time to notice something subtle, like the sun in relation to a fixed object like a chimney, or mountain peek, etc.

Whew, maybe someone can get this question to Dr Kaku!!!!

I hate to be the one to share this but the earth isn't going to shift on it's axis.

You need to look at the year 2003 as being the year of significant change. June 5-8th will be one you want forget.

You can't just tease us like this. Do you have any more information/sources for this? We like to dig into things around here, and would appreciate the leads.

I don't know about the earth as a whole, but I did have some earth shifting in my front lawn over Halloween.

I realize most of us in this forum take our Christianity seriously, but I have to admit, our family lets our collective hair down from mid September through October.

So, for those who are not already of a mind to declare me a heretic, I've posted pictures of our "graveyard". If anyone is interested, try [GallagherFamilyHaunt](#).

It's still evolving (all of this is taken from my camcorder, the photos will come later). Just wanted to share one of my hobbies with you all.
